White Sands Missile Range

Within the HHSTT infrastructure, there is a 6,000-foot 1,829 m rainfield that is used to study the erosive effects caused by the impact of raindrops on material samples or components of weapon systems carried on rocket sleds.

IM

DoD expects contract work to conclude by Aug. Why a Ship in the Desert The NSWC PHD Desert Ship, located in the middle of the desert at White Sands Missile Range, has proven beneficial to the Navy for a number of reasons.

WHITE SANDS MISSILE RANGE (WSMR) TELEMETRY TRACKING IMPROVEMENTS

The Desert Ship is continually being upgraded to meet live-fire testing requirements of today and tomorrow and is migrating to an increasing role in cooperative, integrated synthetic and live-fire testing. The Test Track provides its services to a wide variety of American defense and agencies such as the Air Force, , , and the , as well as America's allies. Our communications personnel operate, maintain, and troubleshoot digital and analog telecommunications equipment and systems.

IM

The ten volumes are titled: Data products, Techniques of statistical analysis, Least squares, Coordinate systems and map projections, Meteorology and timing, Radar systems, Telemetry systems, Drone formation control system, Optical instrumentation systems, Optical data reduction. The Navy has been part of the test community at White Sands since 1946. The White Sands' live-fire mission is critical to the acquisition and fielding of

Navy weapons.
