Danger Cave

Dozens of bodies, dating from the first century CE, bear clear signs of hand-to-hand combat: skulls crushed as if by cudgels; limbs broken at the time of death; and, most damning, weapons still lodged in the back, breast and pelvic bones of some victims — including stone points, bone awls, and knives made of obsidian glass. The original sifting through the bones and rough cataloguing was hampered by the lack of comparative skeletons to help identify them.

Incredible Ancient Archaeological Sites in the U.S.

Former state Archaeologist David Madsen, who has excavated in Danger Cave, is leading the tours. He selected two caves on the west side of the Great Salt Lake and in the summer of 1949 established a camp just east of Wendover. Thanks to the resources at NHMU and the Anthropology Department at the U, Wolfe is able to be much more specific with her identifications.

The Cave That Holds a Million Bones

Our growth and development continue to be a big part of what makes up Magna. Indian Cave or Picture Cave — contains rock artwork of hunters on horses armed with spears and bows and arrows that is fascinating and unique.

Danger Cave Near Wendover Provided Clues to Ancient Utah Dwellers

Below is the replaced marker and text on the same stone from when I stopped by in 2018. Each additional find represents another knock against Euro-centric theories of the evolution of human intelligence. The data collected from the cave led Jennings to startling new conclusions about a previously unknown, ancient Desert Culture in the western U.

Archaeology Excavations: Danger, Jukebox caves offer valued insights into Utah's past

The building also served as a public school. Matt Schmader in 1988 excavated 35 a houses and 12 burials in the same area across from Bernalillo.

Danger Cave

It got its current name in 1943 when soldiers from Wendover Air Base working on the Manhattan Project leveled a back portion of the cave and hauled up materials to create a dance floor. Retired state archaeologist David Madsen, along with current state archaeologist Kevin T.

Why a Utah cave may hold clues to climate change and a warning about our water future

Similarly portable engravings that date to roughly the same time period—about 20,000 years ago—have been found in Europe and Western Asia. The bulk of the records concern sites in Utah, with a small quantity of materials related to sites in Nevada and Wyoming.
