Exploration drilling activity expected to recover in 2021, says Westwood Global

WSS says its approach to plugging and abandoning old wells is more cost-efficient and safer than conventional techniques, and wants to create 400 jobs during the next five years.

Offshore Hydrocarbon Wells

Shortly after announcing the results of the earlier this month, the UK government launched a policy review of its future offshore oil and gas licensing regime as part of the net-zero emissions target. It has already made its maiden acquisition, which it has renamed the Well-Safe Guardian and is upgrading into a product which can be adapted across the oil industry. According to published by energy research firm Rystad, oil and gas exploration work remained stable over 2020, despite the pressures of the Covid-19 pandemic, with 73 new discoveries as of October suggesting that the sector is more resilient than previously thought.

Oil and Gas Authority: UK Continental Shelf (UKCS) Oilfields

Since 1970 the industry has paid almost £330 billion in production tax. In September, Alyson Harding, technical manager at Westwood, said in Energy Voice that the company predicts only five exploration wells will be drilled in 2020, one less than in 2018. As part of the funding commitment to WSS, Mr Metherell is expected to join the company's board.

London-listed oil and gas minnows, interested in backing projects in the North Sea, are becoming financially distressed, says corporate health monitor Company Watch.

DNO to decommission up to 21 wells offshore UK

Rystad Energy projects UK oil and gas production to rise over the years and peak at 2. Mariner is an operator field development that belongs to the company. Responsibility for offshore safety was transferred in 1991 from the Department of Energy to the Health and Safety Executive.

If developments progress as planned, production could increase to 1. The EDPR led Moray East and RWE Triton Knoll wind farms are expected to deliver first power to shore in early 2021, delivering an extra 950 MW and 857 MW capacity respectively. Some 10,000 kilometres of pipelines, 15 onshore terminals and around 5,000 wells are also part of the infrastructure planned to be gradually phased out, although some, or parts, of the onshore terminals will remain because they are import points for gas pipelines from Norway and the Netherlands.

On completion of the Petrofac STA, Amjad Bseisu will step down from his role as Chief Executive of the Energy Developments business unit and as a Director of Petrofac and will become Chief Executive Officer of EnQuest. Oil and gas are also major feedstocks for the petrochemicals industries producing pharmaceuticals, plastics, cosmetics and domestic appliances.
