## Details

However, acceptable forage yields were obtained for nearly all planting dates from mid-April through mid-July.

## Grasses of Tennessee; Including Cereals and Forage Plants

Spring cereals oats, barley, spring wheat, spring triticale Spring cereals planted in late June or July will likely develop heads, shatter and possibly produce volunteer plants. Focus on Forage — Vol 5: No.

## Grasses of Tennessee; Including Cereals and Forage Plants

Although dry matter yields are less than that of alfalfa or corn silage, spring small grains offer dairy producers a good forage alternative in years of short forage supply.

## What are native, warm

These plants usually come from the grass family, but not all forage crops are grasses. While there are many species of such grasses, Keyser says five of them have excellent potential as forages: Switchgrass — Because of its role in bioenergy, switchgrass may be the most familiar of these grasses. Patrick Keyser, University of Tennessee professor and director of the Center for Native Grasslands Management, says these grasses are simply forages that grow naturally in the eastern two-thirds of the U.

## Prevented plant: Cover crop and forage options
