Differences in Measurement Methods Measuring a target can be done through either direct measurement or indirect measurement. If you know how long something is in meters, but need to know feet? It is also appropriate to say that measurement is done by a worker using a measurement system, and instrumentation is done by a technician. Measurement Fundamentals What Is Measurement? The instruments provide accurate measurement of atmospheric conditions.

## Measurement Index

The instruments are used for taking measurements of atmospheric conditions. Although direct measurement allows measurement results to be known as they are, errors may occur depending on the skill of the person doing the measurement.
