Substrate-Independent, Fast, and Reversible Switching between Underwater Superaerophobicity and Aerophilicity on the Femtosecond Laser-Induced Superhydrophobic Surfaces for Selectively Repelling or Capturing Bubbles in Water. Tremblay, in , 2016 Abstract The generally very low concentrations of pharmaceutical species in natural environments make both their identification and quantitation very difficult particularly as they often occur as complex mixtures in a background matrix of uncharacterized natural organic matter. Langmuir 2012, 28 42 , 15047-15055.

Bio-Inspired Titanium Dioxide Materials with Special Wettability and Their Applications. The phylogenetic distribution of gene losses and the high level of sequence divergence in targeting transit peptides suggest multiple independent transfers of both *sdh3* and *rps14* across asterids. Versatile and Functional Surface Patterning of in Situ Breath Figure Pore Formation via Solvent Treatment.
