A consumer survey on food additives

In part, this is because it is now realized that virtually any chemical, even at a low level of exposure, might prove carcinogenic in some individuals. The samples were shipped centrally for examination and standard operation protocols SOP as well as a central training of field staff were provided to all centres.

How Consumer Attitudes Towards Food are Changing

Screening, shop tours and point-of-purchase interventions are ways in which information can be provided. To their credit, the food industry is beginning to respond to these concerns. The research was commissioned after the gazettal of Proposals P295 — Consideration of Mandatory Fortification with Folic Acid, P230 — Iodine Fortification, and P1003 — Mandatory Iodine Fortification for Australia.

[PDF] A survey on awareness of consumers about health problems of food additives in packaged foods and their attitude toward consumption of packaged foods: a case study at Jimma University.

The ambivalent relationship with food — wanting to enjoy it but conscious of weight gain is a struggle experienced by many. For those who believe their diets to be healthy it has been suggested that if their beliefs about outcomes of dietary change can be altered, their attitudes may become more favourable and they therefore may be more likely to alter their diets.

Food additives among top food safety concerns

Restraint and perception of body weight among British adults.

Food and Health Survey gauges consumer attitudes to food and nutrition

Apple juice was used to assess sweet and aroma preference and crackers were used to assess salty, fatty and umami preference. Sources used and trusted by nationally-representative adults in the European Union for information on healthy eating. The Stages of Change model, in contrast to the other models discussed, has proven to be more popular for use in changing behaviour rather than in explaining current behaviour.

Consumer Concern About Chemicals in Food Continues to Grow

Awareness and compliance with the Australian dietary guidelines. Cross-cultural validity of the food-related lifestyles instrument FRL within Western Europe.
