Water masses originating in the east of the basin flow westward and penetrate the Adriatic Sea and the Ionian Sea; on approaching the Strait of Sicily, part of the water mass is recirculated back within the eastern basin, whereas the remainder continues to enter the western Mediterranean basin. Precipitation Patterns Mediterranean Climate is dominated by the subtropical high pressure during summer. Since April, the coastguard has used water samples, underwater footage filmed by remotely operated vehicles and its own divers, and a census of unusual sightings of marine species close to heavily populated areas to monitor the sea.
