

Reported stress, personality, and mental health in parents of children with pervasive developmental disorders.

- - Parenting stress and competence in borderline personality disorder is associated with mental health, trauma history, attachment and reflective capacity

DSM-5 Autism Spectrum Disorder		
Core criteria (dimensions)	Severity levels	Specifiers
A. Social communication impairment	1. Requiring support	With or without accompanying intellectual impairment
B. Restricted and repetitive behaviors	2. Requiring substantial support	With or without accompanying language impairment
	3. Requiring very substantial support	Associated with a known medical or genetic condition or environmental exposure
Other criteria		
C. Symptoms are present in the early developmental period		Associated with another neurodevelopmental, mental, or behavioral disorder
D. Symptoms cause clinically significant impairment in social, occupational, or other important areas of current functioning		ADHD
E. These disturbances are not better explained by intellectual disability or global delay		Anxiety Disorder
		Developmental coordination disorder
		Disruptive behavior disorder
		Impulse control disorder
		Conduct disorder
		Depressive disorder
		Bipolar disorder
		Tic disorder
		Personality disorder
		Self-harm
		Eating disorder
		Elimination disorder
		Sleep disorder
		With cataplexy

Description: -

-Reported stress, personality, and mental health in parents of children with pervasive developmental disorders.

-Reported stress, personality, and mental health in parents of children with pervasive developmental disorders.

Impairment of quality of life in parents of children and adolescents with pervasive developmental disorder

Mediators in the randomized trial of Child- and Family-Focused Cognitive-Behavioral Therapy for pediatric bipolar disorder.

Pervasive Developmental Disorder (PDD) symptoms and treatment

Conversations might often be one sided and focus on themselves. Only a handful of studies have examined parenting stress associated with pediatric psychiatric disorders, and even fewer have focused on caregivers of children with bipolar spectrum disorders BPSD. Conclusion Parents of children with PDDs seem to display a higher burden, probably for a combination of environmental and genetic factors.

Behaviour and emotional problems in toddlers with pervasive developmental disorders and developmental delay: associations with parental mental health and family functioning

Rice CE, Baio J, Van Naarden Braun K, Doernberg N, Meaney FJ, Kirby RS, ADDM Network: A public health collaboration for the surveillance of autism spectrum disorders.

The Presentation of Anxiety in Children with Pervasive Developmental Disorders

Psychostimulants including different formulations of Methylphenidate and Dexamphetamines remain the primary medication of choice for management of ADHD in CYP for more than 60 years. Notably, certainty about mental states had the strongest association with parenting satisfaction. Background Individuals with borderline personality disorder BPD may experience additional challenges in their parenting role, including increased stress and lower self-efficacy and satisfaction.

The Presentation of Anxiety in Children with Pervasive Developmental Disorders

Child anxiety and disruptive behavior were associated with elevated caregiver stress only for non-BPSD children. American Journal of Public Health. Thus, findings may differ within a less acute sample.

Behavioural and emotional disorders in childhood: A brief overview for paediatricians

This might be seen as rejection. Life stress and the course of early-onset bipolar disorder.
