Mushin (mental state)

They watched two separate sets of Hollywood movie trailers, while fMRI was used to measure blood flow through the visual cortex, the part of the brain that processes visual information. He was impressed by the way the AI had learnt to read letters of the alphabet that it had never encountered before. Louis Frederic author , Paul H Crompton editor.

Scientists use brain imaging to reveal the movies in our mind

It includes discussion topics and questions after each chapter.

Japanese AI recreates images you're thinking about

University of Hawaii Press, 2001, p.

The Japanese mind : essentials of Japanese philosophy and culture : East

Previously, Gallant and fellow researchers recorded brain activity in the visual cortex while a subject viewed black-and-white photographs. The chapters are organized alphabetically by topic, with some questions for study at the end of each chapter.
