Notice bibliographique Limitations and prospects for retinal surgery / 8^e Meeting of the Jules Gonin club, Miami, Fla., October [1

In case of subretinal application, the retinal pigment epithelium can be affected. After the opaque structures were removed, the deteriorated vision significantly Fig. The color OCT image can be intersected with the grayscale SLO fundus image to detect exactly where on the fundus an OCT finding is located.

Vital Dyes in Vitreoretinal Surgery: Chromovitrectomy (Developments in Ophthalmology, Vol. 42)

Another clinical investigation by Tadayoni et al.

Limitations and prospects for retinal surgery : VIIIth meeting of the Jules Gonin Club, Miami, Fla., October 1972

However, the staining of the vitreous should remain transparent so that adjacent structures of the retina can be seen. The appearance of advertisements in the book is not a warranty, endorsement, or approval of the products or services advertised or of their effectiveness, quality or safety. J Cataract Refract Surg 1998;24:19—20.

Vital Dyes in Vitreoretinal Surgery: Chromovitrectomy (Developments in Ophthalmology, Vol. 42)

ICG solutions up to a concentration of 0. A large cross-sectional clinical study performed at the National Eye Institute has been conducted and the results have been submitted for publication.

Limitations and prospects for retinal surgery : VIIIth meeting of the Jules Gonin Club, Miami, Fla., October 1972

Invest Ophthalmol Vis Sci 2006;47:3573—3578.

Vital Dyes in Vitreoretinal Surgery: Chromovitrectomy (Developments in Ophthalmology, Vol. 42)

For the higher-concentrated ICG solutions, severe retinal damage with histologically detectable alterations of retinal tissues could be determined. However, fluorescein demonstrated no staining of the epiretinal membrane and therefore was not recommended for this maneuver. Trans Am Acad Ophthalmol Otolaryngol 1971;75:813—820.
