### Dolphin Research Center

Although dolphins do not possess external hind limbs, some possess discrete rudimentary appendages, which may contain feet and digits. Both dolphins and fish have adapted to live their whole lives in the water, both have streamlined bodies and fins.

### ESPN: Serving sports fans. Anytime. Anywhere.

Dolphins are social that interact with one another, swim together, protect each other, and hunt for food as a team. Starting with the 1972 perfect season, these uniforms were used as the primary uniforms for road games and daytime home games, due to the extreme heat of South Florida. Dolphins range in size from the 1.

### Miami Dolphins

They have developed numerous adaptations that make them well suited for life in water including a streamlined body, flippers, blowholes and a layer of blubber for insulation.

The epidermal rete pegs are the epithelial extensions that project into the underlying connective tissue in both skin and mucous membranes. When a pregnant female is ready to deliver, she separates herself from the rest of the pod to a location near the water's surface.

### **Miami Dolphins**

When playing with objects or small animals, common behavior includes carrying the object or animal along using various parts of the body, passing it along to other members of the group or taking it from another member, or throwing it out of the water. Forms of care-giving between fellows and even for members of different species see are recorded in various species — such as trying to save weakened fellows or female holding up dead calves for long periods. Retrieved January 4, 2010 — via dolphinmovie.
