Kenora District and similar settlements

Snelgrove 9 1963 Duluth, MN Henry Lepp 10 1964 Ishpeming, MI A. Ontario is a showcase of geological processes caused by these shifting plates, including volcanism, earthquakes and mountain building. The tholeiitic-komatiitic sequence contains two parts as well: a lower part composed of tholeiitic pillowed basalt, which contains the Austin Shear Zone, the host for the gold deposits; and an upper part of tholeiitic-komatiitic felsic to intermediate volcanics with minor interspersed mafic volcanics.

All we ask is that if you make use of them you provide due credit to the original authors. The stock was emplaced at a relatively deep crustal level as inferred by the contact relationships between the pluton and the supracrustal rocks. A major mining exploration project is currently underway in the region, centred on the district's isolated.
