Bioethics Case Based Teaching Guides for Resident Training

We have developed a case-based modular curriculum designed to function as a how-to resource for residency and fellowship training programs. Using systems thinking, residents will approach problems with a goal of fixing the underlying system that causes the problem, not just creating a workaround that solves the problem at hand. Residents must develop systems thinking; that is, they must understand how parts relate to a whole: how the system works, and how it can work better, with the ultimate goal of fewer errors and better performance.

Bioethics Case Based Teaching Guides for Resident Training

It is not simply about the patient or the problem in front of them; rather, it is about how a physician can understand, navigate, and improve the system.

Bioethics Case Based Teaching Guides for Resident Training

The next subcompetency of Systems-Based Practice is related to working in various health care delivery settings: a resident must demonstrate the ability to coordinate patient care within the health care system relevant to their clinical specialty. Practice-based improvement is also highly effective, as physicians apply that knowledge to real-life situations occurring in daily medical practice.

Practice

By employing quality improvement methods to systematically evaluate their own practice, physicians can implement changes for continuous improvement of that practice. The ACGME Core Competency of PBLI is an essential skill set for residents and physicians, helping them develop the mindset of lifelong learning and continuous improvement through real-world observation, self-reflection, scientific data, and the give and take of teaching and learning.

Evidence Based Medical Ethics Cases For Practice Based Learning PDF Book

The ACGME Core Competency of Systems-Based Practice: A Necessary Mindset Although the ACGME Core Competency of Systems-Based Practice is sometimes seen as esoteric and challenging to teach and to learn, it is an essential piece of medical training. What do all of these diverse facets of medical practice have in common? Residents must recognize that their role as physician within the health care system carries a responsibility to the wider world. ACGME Core Competency: Systems-Based Practice Systems-Based Practice is often seen as a relatively abstract concept for residents to master.
