Data report: molecular and stable isotope analyses of sorbed and free hydrocarbon gases of Leg 146, Cascadia and Oregon margins.

Crustal anisotropy in the forearc of the Northern Cascadia Subduction Zone, British Columbia

Yearly time-series of median solid line and 1st percentile dashed-dotted line weekly power spectral density at 100 Hz recorded at the Endeavor node hydrophone station for 2017 black , 2018 navy , 2019 blue , and 2020 red. Santa Barbara Basin explanatory notes. As part of a broader study, we investigated the effects of acclimation food ration, acclimation emersion air temperature, and sirtuin inhibitors on the feeding behavior of the California mussel, *Mytilus californianus*, during recovery from acute aerial heat shock.

Scientists uses drones to collect rare perspective on endangered southern resident killer whales

Southern Cascadia episodic slow earthquakes.

Western Queen Charlotte Sound was probably part of this basin, while eastern Queen Charlotte Sound and Hecate Strait largely lost their source rocks and received few Cretaceous deposits.

Siletzia

QTC MULTIVIEW provides automated classification of multi-beam sonar data, while QTC SIDEVIEW software works with side-scan data. It was further assumed that the habitat model predicts the potential habitat for non-spawning adult sardine, a hypothesis largely supported by comparing the model predictions with independent information from the fishery in the northeast Pacific and trawl surveys in proximity to the Columbia River mouth, where large catches during summer and the absence of sardine during the rest of the year were accurately represented by the monthly habitat predictions.

Submarine landslides offshore Vancouver Island along the northern Cascadia margin, British Columbia: why preconditioning is likely required to trigger slope failure

This culminated in 2002 in the release of QTC MULTIVIEW software, following fifteen person-years work and the filing of patents in the USA, England, and cooperation with strategic partners such as the Geological Survey of Ireland see image. The seasonality of the TZCF appears to regulate the northward and offshore limits of sardine habitat cf.
