The Butterflies of Kenya and Their Natural History

Part 2 Species account of Kenyan butterflies: papilionidae; pieridae; lycaenidae; nymphalidae; hesperidae. Nearly all species are illustrated in colour on the 125 plates, many of which have never been adequately figured before. However, a positive result of this constraint was that some important forests in Ghana and Nigeria could be investigated in more depth than any other localities in tropical Africa.

The Butterflies of Kenya and Their Natural History

For Librarians: Integration of your institutional LibKey profile with CAB Direct is very quick and easy! Please email CABI with your LibKey API Key and LibKey Static ID which may be requested from Third Iron. Introductory chapters cover butterfly biology, ecology, and behaviour in the Kenyan context, followed by detailed species accounts which cover appearance, field characters, Kenyan and African distribution, subspecies, habits, larval food plants, and additional life history information when known. In: Bulletin de la Société entomologique de France, volume 97 1, mars 1992.

The butterflies of Kenya and their natural history (Book, 1991) [satis.farmjournal.com]

It is the result of more than ten years of intensive personal research. No other book on the East African butterfly fauna approaches the depth of coverage given here.

Butterflies of Kenya: And Their Natural History

This book attempts to summarize all that is known about the nearly 1,500 butterfly species known from West Africa, the fifteen countries that stretch from Senegal and Mauritania on the Atlantic to Nigeria and Niger in the east, touching also on the extreme western parts of Cameroun Mauritania, The Gambia, Senegal, Guinea-Bissau, Mali, Guinea, Sierra Leone, Liberia, Burkina Faso, Côte d'Ivoire, Ghana, Togo, Bénin, Nigeria, and Niger. Welcome to CAB Direct CAB Direct is the most thorough and extensive source of reference in the applied life sciences, incorporating the leading bibliographic databases CAB Abstracts and Global Health. About this book A guide to the 870 butterfly species recorded from Kenya.

The fauna of West Africa accounts for well over a third of all butterflies in the Afrotropical biogeographical region, and about one in twelve of all butterflies known worldwide. Of equal importance has been the study of much unpublished material, old as well as new, in museums and private collections in many parts of the world. I am a novice exploring this part of the World.

The Butterflies of Kenya and Their Natural History

Though the author has reviewed virtually all literature on West African butterflies, the book is largely the result of his personal research programme in West Africa and in Museums. Butterflies are potentially an important group of indicator species for biodiversity, ecology, and for biogeographical studies: but such a role cannot be fulfilled unless they can be properly identified.
