Han'guk t'onggye yŏn'gam = Korea statistical yearbook

Although he clearly admitted from the outset that he was writing from a nationalistic agenda in a search for the autonomous roots of scientific and technological studies, and though he paints a good case for the fact that significant strides were made in the Taehan empire period towards scientific and technological development independent of Japan, his agenda is too overarching at the expense of a more neutral interpretation.

As Kim admits, the relationship between the colonial subject and the colonizer was so entangled that it was often difficult to properly identify Koreans or Japanese statistically. Kim argues that a significant amount of local development in scientific and technological studies existed even before the Japanese arrived on the scene. Kim Kŭnbae has exhaustively researched and documented this book, providing us with a richness of data that will prove to be an invaluable tool for other historians and will be a great foundation for further scholarship on this topic.
