Incorporating sustainability: federal contaminated sites decision

Welcome to the Idle-Free Zone — Website.

Sustainability and Remediation

Where applications are approved, conditions should be put in place to ensure that land is remediated before the commencement of any new use.

Incorporating sustainability: federal contaminated sites decision

It outlines the Defence framework for implementation of sustainability principles in contamination management including identification of the key property life cycle points at which to consider sustainability, and a framework for the consideration of sustainability in the broader contamination management options assessment process.

Sustainability and Remediation

Three Defence case studies are presented that have evaluated remediation options, taking into consideration the environmental, social and economic benefits and dis-benefits that may ensue.
