team, including former ANU PhD scholar Tom Shiell now at Carnegie Institution for Science, previously created Lonsdaleite in the lab only at high temperatures.

How Do Diamonds Form?

The recent expansion of this industry in India, employing low cost labor, has allowed smaller diamonds to be prepared as gems in greater quantities than was previously economically feasible. Therefore, once the diamond is formed, it will not reconvert back to graphite because the barrier is too high. Kimberlite pipes can be difficult to find.

Diamond

With this system, diamonds are graded by color alphabetically from D to Z, where D is colorless and Z is heavily tinted.

Scientists Defy Nature: Making Diamonds in Minutes at Room Temperature

Scientists are still struggling to figure out how long it takes diamonds to form. Roughly 49% of diamonds originate from and , although significant sources of the mineral have been discovered in , , , and.
