Examining Environmental Predictors of Community Participation for Adults with Autism Spectrum Disorder Using Geographic Information Systems (GIS)

Office of Community Planning and Development, U.

Participatory Geographical Information Systems (PGIS)

These objects provide application developers with powerful mapping and GIS capabilities. Research in Autism Spectrum Disorders, 8 3 , 214—229. Funding The research is funded by the Health Research Council of New Zealand grant no.

Community Participation and Geographic Information Systems

The MapObjects map control plugs directly into the tool sets of many standard development environments.

Examining Environmental Predictors of Community Participation for Adults with Autism Spectrum Disorder Using Geographic Information Systems (GIS)

The minimum requirements for hardware are as follows: Platform: PC or Any Platform running Windows NT Processor: Intel 486DX 33 MHz Operating System: Windows NT Disk Storage: 10 MB Memory: 8 MB The system I used to create the prototype includes: Platform: DELL PC Processor: Intel 586DX 167 MHz Operating System: Windows NT 4.

Community Mapping and Geographic Information Systems

Disability-related terminology in common use varied between the vision, mobility and hearing impaired communities in NZ and information sheets were tailored to reflect these differences. The MapObjects Internet Map Server can be used to solve a wide variety of Internets and Intranet

needs. When data were reviewed, time data was frequently incomplete and its accuracy uncertain.

Enabling participation for disabled young people: study protocol

In fact, there is a great deal that planners in the global South can learn from the field of development studies and particularly from the critiques of participatory processes in this discipline. Moreover, Public Participation GIS and Personal GIS would be capable of managing and integrating all data components and participant contributions from one interface. Working flexibly with a range of methods and accommodations is enabling the research team to work respectfully and effectively alongside participants with diverse lived experience of disability and differing access needs and preferences.

GIS as a community engagement tool: developing a plan to reduce infant mortality risk factors

In healthful living environments the local authority functions are of continuing and indeed expanding importance, as in urban planning and transportation, promoting easy access to commercial facilities for shopping and healthy food sources for poorer sections as well as those available to prosperous members of the community.
