Top (Dynare Reference Manual)

Time series analysis involves understanding various aspects about the inherent nature of the series so that you are better informed to create meaningful and accurate forecasts. Sometimes, you might have seconds and minute-wise time series as well, like, number of clicks and user visits every minute etc.

CiteSeerX — TSP 5.1 Reference Manual

How to estimate the forecastability of a time series? The second argument maxlag says till how many lags of Y should be included in the test.

Top (Dynare Reference Manual)

So why does a stationary series matter? The stationarity of a series can be established by looking at the plot of the series like we did earlier.

Mplus Version History

Whereas seasonality is observed when there is a distinct repeated pattern observed between regular intervals due to seasonal factors. Why make a non-stationary series stationary before forecasting? Within these sub folders, the actual data is stored.

A multi

So, stationarizing the series solves this problem since it removes any persistent autocorrelation, thereby making the predictors lags of the series in the forecasting models nearly independent. If you consider the sound signals in an FM radio as a time series, the blank sound you hear between the channels is white noise.
