The role of occupational therapy in leisure adaptation with complex neurological disability: a discussion using two case study examples

Intervention areas vary widely and are based upon enjoyable and rewarding interests of the client. This is quite acceptable within the administration guidelines.

Reheal

Unlike dementia in the general population, it appears changes in behaviour are often one of the first indicators that the signs of dementia are present in that individual.

Occupational Performance Issues

Figure 12-3 shows an example of how this form is completed. The purpose of this study was to determine personal factors that might predict health-related lifestyles in a sample of community-dwelling older adults.

Personal Factors Predictive of Health

Interestingly, as distinguished by in her Health Promotion Model, personal psychocognitive factors, such as self-perception of health and self-efficacy, may have more direct influence on the pattern and frequency of health-promoting behaviors, whereas personal demographic characteristics, such as age, gender, race, and marital status, are considered modifying factors that have indirect effects on health behaviors.
