Timeline of prehistory

When I did a big assignment for National Geographic 15 years ago in Svalbard, Norway, we had to put that assignment on hold year after year because the story was to be out on the ice filming polar bears, and there was no ice.

Photographer Paul Nicklen: Witness to a Vanishing Arctic

It drained many rivers including the present-day Vistula, Elbe, Rhine, Seine and Thames, as well as capturing melt from the shrinking ice sheets. .

Grisly find suggests humans inhabited Arctic 45,000 years ago

What about all of those other warm periods? In addition, flint becomes brittle at low temperatures and may not have functioned as a tool. It shows an adult and a juvenile specimen of the sauropod *Europasaurus holgeri* and iguanodons passing by. The Carboniferous rainforest collapse left behind vast regions of desert within the continental interior.

Ancient Siberia was home to previously unknown humans, say scientists

Molecular analysis of Neanderthal DNA from the northern Caucasus. It is the oldest known ceramic in the world. There are a couple of possibilities, and both of them might be at play, here.

Human presence in the European Arctic nearly 40,000 years ago

Ancient Earth: The size of *Coelophysis bauri* compared to a human. In North America they stretched over Greenland and Canada and parts of the northern United States.
