How Technology is Changing Nursing Practice for the Better

We carried out a cross-sectional survey at Haukeland University Hospital in Bergen, Norway. The ISRN offers scientists and clinicians from across the nation opportunities to directly engage in conducting studies. Comprehensive electronic health record EHR is used for care management tracking CMT.

Using data in nursing practice

Simple solutions do not exit. As the public becomes more aware of the cybersecurity and privacy issues faced by organizations that hold large amounts of valuable data, the use of this data will be informed by evolving ethical standards. It investigates the factors that influence access to health care and looks to identify solutions that will improve the overall delivery system.

Emerging Global Health Issues: A Nurse's Role

Together, all these national initiatives have accentuated the need for — and provided support for — EBP in the care of older people, and in particular the responsibility of RNs in these matters.

Using data in nursing practice

If we are to achieve true population health, it will be essential to have models in which clinical care is joined with a broad array of services supporting behavioral change and is integrated or coordinated with other community and public health efforts to address the social context in which people live and work.

Clinical leadership development and education for nurses: prospects and opportunities

Ultimately, meaningful use compliance results in improved clinical and population health outcomes, increased transparency and efficiency, empowered individuals, and robust research data on health systems. Improvement Science Research Network The overriding goal of improvement science is to ensure that quality improvement efforts are based as much on evidence as the best practices they seek to implement. When improvement is needed on a unit-specific outcome, the unit-based nursing quality council UBNQC reviews, communicates, and takes action.
