Cite prior relevant trials or systematic reviews that would help to justify why this trial is needed and inform its design. Depending on the selection, additional genetics expertise and leadership still may be required at IRP.

## Criteria for evaluating treatment guidelines

Of particular note is the previously described NIMH Genetics Initiative, which reflects many of the qualities that the Workgroup finds most promising. Second, short-term training programs for new investigators or investigators seeking to redirect their career or broaden their skills should be established.

## Psychotherapy for Anxiety Disorders

Family-genetic and psychosocial risk factors in DSM-III attention deficit disorder.

## What are the treatments for comorbid substance use disorder and mental health conditions?

Data and Safety Monitoring Requirements: The NIH policy for data and safety monitoring requires oversight and monitoring of all NIH-conducted or -supported human biomedical and behavioral intervention studies clinical trials to ensure the safety of participants and the validity and integrity of the data. Summary In summary, the NCDDG Program will support broad, innovative, multidisciplinary approaches to the discovery of new, rationally based treatments and research tools for mental disorders, SUDs or AUD. The NIH and DOE genome programs have decided to require all applicants expecting to generate significant amounts of genome data and materials to describe in their application how and when they plan to make such data and materials available to the community.

## **Treatment of Mental Illness**

According to the description of chronic pain disorder in DSM-IV, the word somatoform was dropped from the title.

## **Routine Psychiatric Assessment**

Subsequent Ovid Medline searches were conducted looking for specific topics such as zinc and eating disorders.
