## Tall oil production process and characterization

In the sulfate or Kraft paper process, chips of pinewood are digested or cooked under pressure in an alkaline solution. The polar organic material is selected so that it is substantially miscible with relatively fresh water and the bank is therefore miscibly displaced by water at its trailing edge. .

The second flood is illustrative of the process of this invention. The salinity of naturally occurring connate brines is variable.

## Oil recovery process using tall oil additive (Patent)

Figure shows that tall oil losses can be 50 % after two months of storage. The rest of the black liquor is reduced by evaporation. Second Bunk Composition-Weight Percent 0.

## Continuous acidulation process for tall oil production

Custom tally books are designed to fit in pockets and other small spaces for easy accessibility. Successful pitch characterization is quite difficult to be attained because pitches are very complex mixtures containing several hundred compounds with different functionalities.
