Rangeland problems in the Kainji Lake Basin area of Nigeria

Overall, this study highlights wide range breeding seabirds, such as Calonectris shearwaters, as suitable organisms for biomonitoring large geographic trends of organochlorine contamination in the marine environment. The groundwater reservoir feeds the corresponding surface store, and the surface stores are connected via the river network. .

These cruises were part of the COCA Project Coastal-Ocean Carbon Exchange in the Canary Region. Spatial homogeneity is probably related with island proximity and local dynamics over Condor seamount. Results showed that there was a relationship of power function between initial runoff-generation time and rainfall intensity.

By ranking the significance of the input parameters, we showed that the parameter set dimensionality could be reduced for CLM4 parameter calibration under different hydrologic and climatic regimes so that the inverse problem is less ill posed. Three assemblages are located in the summit: the shallowest one 730-770 m, in the boundary between Eastern North Atlantic Central Water ENACW and Mediterranean Overflow

Water MOW water masses is typified by ophiuroids and characterized by medium sands. The position of this curve defines the infiltration and surface-retention storage parameters.

Rangeland problems in the Kainji Lake Basin area of Nigeria

The pore types and PSDs of marine shale have been well studied; however, research on lacustrine shale is rare, especially for shale in the oil generation window, although lacustrine shale is deposited widely around the world.

The research was supported by the grant QJ1520265 of the Czech Ministry of Agriculture, using data provided by the Czech Hydrometeorological Institute. We investigated the variability in runoff and quantified the contributions of precipitation and anthropogenic activities on runoff at the LPRB. The second stage was the hydrological modelling.

runoff basin dcprb: Topics by Science.gov

Annual precipitation had significant effects on the annual runoff coefficient.
