Aerobic removal of stigmaterol contained in kraft mill effluents

The treatment in the aerated lagoons operating in the OLR 0.

Anaerobic

Washer effluent is collected in the seal tanks and either re-used in other stages as wash water or sent to wastewater treatment. The use of UV-VIS measurements in the determination of biological treatability of pulp bleaching effluents.

Treatability of Bleached Kraft Pulp and Paper Mill Wastewaters in a New Zealand Aerated Lagoon Treatment System

St Lucie Press, Delray Press, FL. The acute toxicity of influent and effluent on D. Most of these parameters show the degradation and non-biodegradable fraction in the kraft mill effluent.

Aerobic removal of stigmaterol contained in kraft mill effluents

Some compounds in the effluents are resistant to biodegradation and can accumulate in the aquatic food chain. In this case, 50% and 75% of COD and BOD 5 were removed, respectively. Foi empregado delineamento experimental para determinar os efeitos do pH, temperatura e quantidade de enzima ligninolítica comercial.
