This raises the problem of adhocness and unfalsifiability: when is it scientifically legitimate to adjust assumptions, and when is this move simply an adhoc adjustment that renders the hypothesis unfalsifiable? So the selection of a small number of topics for extensive empirical research is itself a significant choice, and one that is guided, among other things, by a judgment of the relative explanatory importance of various factors. Because this book is an analytical study, it stresses issues rather than men. Here, the idea is that even individuals who begin with quite different prior probabilities will tend to converge in their views given subsequent exposure to a sufficiently extensive body of common evidence.
