Urban wastewater

The equivalencies and relative rankings can be used to weight the changes in ecological services resulting from management decisions. The current permitting structure at the federal and state levels provides the opportunity to address CSOs and sanitary system overflows simultaneously, provided both systems are owned by the same permittee.

1 INTRODUCTION

Package treatment plants PTPs are facilities designed to treat onsite wastewater for small communities, commercial, and residential developments.

2 KEY ISSUES RELATING TO WASTEWATER AND STORMWATER MANAGEMENT

Exchange with deep ocean waters disperses constituents in wastewater and runoff and prevents their concentration in coastal waters. The significance of this pollution depends on residence time, water circulation and the severity of impact on life forms in the receiving area. Recreational water-quality standards vary from state to state.

Linking Ecology and Economics for Ecosystem Management

Wetland land loss would continue.
