The common sense of the exact sciences : Clifford, William Kingdon, 1845

MLA Citation Clifford, William Kingdon. One is a capability of the animal soul , psūkhē proposed by , which enables different individual senses to collectively perceive the characteristics of physical things such as movement and size, which all physical things have in different combinations, allowing people and other animals to distinguish and identify physical things.

A student, having problems with 's theorem on the attraction of an ellipsoid, describes Clifford's response to his questions:- Without any diagram or symbolic aid he described the geometrical conditions on which the solution depended, and they seemed to stand out visibly in space. I have had in my mind almost from the time I began to fly kites I have not yet left off the problem of finding the form of a kite-string under the action of the wind. The Cartesian project to replace common good sense with clearly defined mathematical reasoning was aimed at certainty, and not mere probability.

William Clifford (1845)

Ironically given Kant's intentions , the same tendency has worked itself out with a vengeance with regards to all judgments of value, including moral judgments. History of mechanism and machine science Springer, Dordrecht, Netherlands, 2007 , 79- 116. In France, the Netherlands, Belgium, Spain and Italy, it was in its initial florescence associated with the administration of Catholic empires of the competing , and dynasties, both seeking to centralize their power in a modern way, responding to and as part of the so-called.

Hence, amongst critics of the methodological argument for assuming self-centeredness in economics are authors such as , who have taken their bearings from the above-mentioned philosophical debates involving Habermas, Gadamer, the anti-Cartesian and others, arguing that trying to force

economics to follow artificial methodological laws is bad, and it is better to recognize social science as driven by rhetoric.
