Basic Model Theory

Every truth-functional three-valued propositional logic can be conservatively translated into the modal logic S5.

The collection contains two parts: foundations and case studies.

Partiality, Modality and Nonmonotonicity : Doherty, Patrick: Amazon.sg: Books

We prove this claim constructively in two steps. Logique et Analyse 29, 225—247 1986. Second, we show that for every S5-model there is an equivalent three-valued valuation and vice versa.

Partiality, Modality and Nonmonotonicity, Doherty

In general, our Translation Manual gives rise to translations that are exponentially longer than their originals.

Partiality, Modality and Nonmonotonicity, Doherty

This edited volume of articles provides a state-of-the-art description of research in logic-based approaches to knowledge representation which combines approaches to reasoning with incomplete information that include partial, modal, and nonmonotonic logics. Kees Doets is a lecturer in the department of mathematics, computer science, physics and astronomy at the University of Amsterdam.
