Adolescent Personality and Behavior: MMPI Patterns of Normal, Delinquent, Dropout, & Other Outcomes.

Understanding a child's special needs allows parents to perform support functions for the child Switzer, 1985. A central issue that has emerged from the work to date is the balance of attention devoted both to personal and social responsibility and to self-esteem.

Risk, Resilience, and Adjustment of Individuals with Learning Disabilities

These measures of validity are very erratic, suggesting either that the phenomenon of self-esteem is not very stable or that its measures are imperfect representations of something else. One national study revealed almost 2 million reported cases of child abuse in 1985 American Humane Association 1987.

Normal cross

As a result, some self-rated instruments include special items or scales to identify distorted responses e.

On the Justifications for Civil Commitment on JSTOR

Women with BPD are more likely to have eating disorders or PTSD, while men are more likely to have co-occurring substance use disorders, along with PTSD and other personality disorders. Motivation to quit among individuals with substance use or mental disorders Many people in mental disorder and substance abuse treatment settings are interested in quitting tobacco, even if the interest is not immediate. However, some syndromes were identified only in scores for a particular instrument.
