It is not always clear from linguistic descriptions if a language has a series of light ejectives or voiceless consonants with glottal reinforcement, or similarly if it has a series of light implosives or voiced consonants with glottal reinforcement. Plena aŭ parta fino de la gloto ankaŭ permesas glotizitajn aerfluo-mekanismojn funkciigi, produktante ejektive aŭ injektivojn; implosive'oj povas sin havi modalan, rigidan, aŭ knarantan voĉon.

Glotigo estas la kompleta aŭ parta fino de la gloto dum la artikulacio de alia sono. Glottalization of consonants usually involves complete closure of the ; another way to describe this phenomenon is to say that a is made simultaneously with another.
