### Permits

In cases where the use level of an FCS is self-limiting, sponsors should provide supporting information or data. On 12 September 1960, an American licensee, the William S. Some advocacy groups, such as and , have criticized the effect of drug marketing to physicians because they say it biases physicians to prescribe the marketed drugs even when others might be cheaper or better for the patient.

TABLE II - FOOD-TYPE DISTRIBUTION FACTORS fT Package Category Food-Type Distribution fT Aqueous a Acidic a Alcoholic Fatty A. American Chemical Society Symposium Series 473: Food and Packaging Interactions II, Chapter 5, 53-66. Special Cooking Applications Advances in packaging technology have led to the development of food packaging materials that can withstand temperatures substantially exceeding 121°C 250°F for short periods of time for the purposes of heating and cooking of ready-prepared food.

### Graphite

In cases where a polymer adjuvant is the subject of interest, test solutions of the polymer formulated without the adjuvant may serve as the matrix for fortification and recovery measurements. Researchers tested , later sold by Merck as Zocor, on 4,444 patients with high cholesterol and heart disease. The sponsor may carry out testing for 30 days to avoid uncertainties in extrapolation.

### Pharmaceutical industry

Note: migration studies conducted according to condition of use C are only adequate to support conditions of use C through G not condition of use H. Information on effective FCNs or Threshold of Regulation exemptions for an FCS may be obtained through the FDA website or by contacting FDA directly.

## **Chemicals and products**

Miglyol 812, a product of SASOL, GmbH, Witten, Germany.

### **Guidance for Industry: Preparation of Premarket Submissions for Food Contact Substances (Chemistry Recommendations)**

**INTRODUCTION** This guidance document is intended for industry and contains FDA's recommendations pertaining to chemistry information that should be submitted in a food contact notification FCN or food additive petition FAP for a food-contact substance FCS. Since the additive is not substantive to paper, the mass of water containing the additive in contact with the pulp at the point in the papermaking process where the slurry enters the drier determines the level of the adjuvant retained in paper.
