

Junior high school arithmetic investment problems

Edwards Brothers - Fun Math Games in Class For Middle School Students

A sum of \$4000 is to be invested, one at 4%, the other at 6%. If the interest earned with the portion invested at 4% exceeds the interest earned by the portion invested at 6% by \$40. How much is invested at each rate?

let $x = \$$ invested @ 4%
 $4000 - x = \$$ invested @ 6%

$$\begin{aligned} \text{[Interest @ 4\%]} &= \text{[Interest @ 6\%]} + 40 \\ (x)(4\%) &= (x)(6\%) + 40 \\ (x)(0.04) &= (x)(0.06) + 40 \end{aligned}$$

Investment Word Problems (video lessons, examples and solutions)

Again, students will be asked to explain and justify their strategies. The alien brain is incompatible.

High School Math: Problem Pages at The Problem Site

This has area $\sqrt{3}$. Turn the first switch on and wait an hour. You want to lay it out in the plane so that the convex hull that surrounds it has the largest area.

Word Problem Worksheets for Grades 6

Leave the ends untied, and use the string to enclose an area against a wall.

11.06.11: Boosting Number Sense in High School Students

Daniel retrieved the hats, but did not notice the differences among them. Suppose you are one of the six people at the party. If cannibals ever outnumber missionaries, on either side of the river, they will eat the missionaries, and we don't want that.

Word Problem Worksheets for Grades 6

Moves are always vertical or horizontal.

12 Days of Christmas Math Activities for Middle School

The first digit after the decimal point is anything other than 6, because 6 is the first digit in the first number on the list. While Family Math has yielded great results, nothing is perfect, and I continue working to improve this strategy to suit the needs of my students and their families. There are many correct answers.
