A GIS analysis of Early Bronze Age settlement patterns in Armenia

Spikes were large, but with rough spikelets and large seeds. The bearers of Classic Mnogovalikovaja culture lived in the steppe zone of the Peninsula, situation proved by the tomb material different constructions, crouched skeletons with buckles, vessels, etc. Scholarly opinion concerning the resulting frequency of hybridization varies greatly, with some believing that there has been essentially no introgression, and others asserting that there was a great deal.

Eurogenes Blog: Understanding the Eneolithic steppe

The growth of private ownership derived a powerful impetus from the domestication of cattle. It is of interest that the dug-in graves outnumber the central sub-barrow graves.

Maykop culture : definition of Maykop culture and synonyms of Maykop culture (English)

It appears that Esdraelon populations of wild emmer were located at the base of rocky, untillable slopes, at the edges of deep soil and cultivation - precisely where hybridization between a crop and a non-weedy species would be most likely to occur.

M.Gimbutas

Hattic in how they sound. Myceneans came with both charriots and swords. Nagornoje II has no stratigraphic confirmation.
