### Evaluation of leaching characteristics of heavy metals from municipal solid waste incineration fly ash by up

Some of these metals are regarded as toxic and hazardous and must be removed before effluents can be discharged to the environment.

### Competitive Cu and Cd Sorption and Transport in Soils: A Combined Batch Kinetics, Column, and Sequential Extraction Study

The petroleum industry has successfully developed secondary recovery methods; steam, carbon dioxide, and water flooding are commonly used to drive oil to the wellheads.

### Development of cellular absorptive tracers (CATs) for a quantitative characterization of microbial mass in flow systems

It was postulated that the formation of hydrotalcite with a suitable stoichiometry, i.

### EPA Science Models and Research Tools (SMaRT) Search

Characterization and leaching assessment of ferronickel slag from a smelting plant in Iligan City, Philippines.

### Leaching behavior of lignite fly ash with shake and column tests

In appearance, an open-pit excavation resembles an inverted pyramid with its tip in the Earth. The primary reasons are technological and economic.

### Evaluation of leaching characteristics of heavy metals from municipal solid waste incineration fly ash by up

Lixiviants are available for leaching not only uranium and copper but also gold, lead, and manganese, to name a few. Look-Ahead Technologies  
Unexpected geological conditions during the mining process can threaten worker safety and may decrease productivity. This article is cited by 72
