STUDIES OF THE BYRON BOG IN SOUTHWESTERN ONTARIO XXX. DISTRIBUTION OF ORCHIDS IN THE BOG on JSTOR

These species were validated primarily on the basis of DNA-DNA hybridization, 16S rRNA gene sequence analysis, antimicrobial susceptibility and biochemical profiles, and, to a lesser. The flies were removed from the trap each day and sorted according to species and sex. Its significance and breadth of coverage are evident in that the American Midland Naturalist is among the most frequently cited journals in publications on ecology, mammalogy, herpetology, ornithology, ichthyology, parasitology, aquatic and invertebrate biology and other biological disciplines.
