## Environmental Factors

Incidentally, Swarth 1934 states that emperor geese were present on Nunivak

Island, to the north, as late as October 29, 1927. Just prior to spawning both sexes turn red with green heads and sport a dark stripe on their sides. Given that Gastornis was large approaching 2 m and flightless, it likely also was a year-round resident of the Arctic.

## Bristol Bay and Alaska's Pebble Mine

As a result, islands with seabirds had plants that grew taller and faster and were much more productive than those on islands without birds.

## Bristol Bay and Alaska's Pebble Mine

Forest Ecology and Management, 1997.

## The palaeobiology of high latitude birds from the early Eocene greenhouse of Ellesmere Island, Arctic Canada

It now appears that intensive off-shore commercial fishing is competing with the orcas for the same food.

## Bristol Bay and Alaska's Pebble Mine

Bird abundance is usually greater at lower elevations and latitudes and these detection patterns likely reflect the presence of more diverse vegetation types.

## What Are the Adaptations for Animals to Survive in the Taiga?

Seals pick a resting place that provides ready escape, always near deep water. Several species of birds such as oystercatchers, curlews, and plovers are predators of these snails and exert top-down population controls, which prevents overgrazing.
