North Carolina State University, College of Natural Resources, Department of Forest Biomaterials Records, 1946

Large waves of strikes swept through timber country in the 1910s, resulting in sporadic wage increases and amelioration of working conditions. Each 3-hour time block was termed a sample run. Under the Environmental Protection Agency's EPA National Emissions Standards for Hazardous Air Pollutants NESHAP ruling, facilities are a major source of HAPs when emissions exceed 10 tons of a single HAP or 25 tons of total HAPs per year; other facilities are area sources EPA 1994.

Volatile organic compounds emitted from hardwood drying as a function of processing parameters

The level of information-sharing currently available through technology continues to foster the research and development of amazing products at a record pace. In , the three major species used for furniture production are oak Quercus spp. The scanning and automation technology used in the forest products industry is the same as that used by the military and the automobile and aerospace industries.

The temperature sensing element of this thermometer is kept moist with a porous fabric sleeve cloth usually put in a reservoir of clean water. The competition for accessible trees that consequently arose often provoked international controversy. For example, a hardwood may be permeable because there is intervessel pitting with openings in the membranes Keey et al.

Archives West: Western Wood Products Association Records, 1909

Fieldproven strategies for reducing volatile organic carbons from hardwood drying. To put this in perspective, if all of this wood was lashed together it could make a floating bridge 2 meters 6.

Volatile organic compounds emitted from hardwood drying as a function of processing parameters

Its original location was in the National Youth Administration Woodworking Shop on Western Boulevard.

Inventory of the National Forest Products Association Records, 1902

Hazardous air pollutant emissions from lumber drying.

Inventory of the National Forest Products Association Records, 1902

A drying zone ranging from 0. However, 1-inch-thick green Red Oak requires about 28 days to dry down to a moisture content of 8%.
