## Magnetism for kids

Rozing in 1892 and P.

## Magnetism

This property is described by the of the matter and depends on the degree of of the matter in the field. The study of the diamagnetic and paramagnetic properties of gases, liquids, solutions, and compounds in the solid phase makes possible an understanding of the details of the physical and chemical processes that take place within the substances, and also of their structure.

## A New Kind of Magnetism Formed by “Magnetic Graphene”

This description is meant only as a ; the shows that diamagnetism is impossible according to classical physics, and that a proper understanding requires a description. The magnetic properties of materials are mainly due to the magnetic moments of their ' orbiting. So, time to learn about a new fundamental force of the universe.

## Magnetism

Neutron-diffraction methods made possible determination of the types of atomic magnetic structures. If no button appears, you cannot download or save the media.
