NYS Speech

Always thoroughly wash hands after contacting a potentially infectious item or wear gloves while cleaning up. Contingency plans are necessary for managing events that may endanger the health and safety of persons served.

Infection Control Resources for Audiologists and Speech

Audiologists and SLPs working in various settings have had questions about what they can use to disinfect against COVID-19 after a patient encounter has occurred, and before another patient is brought into the same space. What follow-up procedures are in place? Lewallen T, Hunt H, Potts-Datema W, Zaza S, Giles W.

Infection Control Resources for Audiologists and Speech

Based on the results of a randomly distributed infection control survey, Hudson and Ballachandra 1996 summarized that audiologists were unaware of the potential sources of cross infection in the clinic, thereby creating an environment of increased risk in the spread of infection and disease. Professional staff members within the program solicit and consider input from persons served as part of the process in establishing a plan of care.
