Chemical and stable isotopic evidence for water/rock interaction and biogenic origin of coalbed methane, Fort Union Formation, Powder River Basin, Wyoming and Montana U.S.A.

Journal of Vertebrate Paleontology, 10 4 : 518—522. American Museum Novitates, 2024: 1—20. Rough Rock occurs between Wind Rock Tongue new of Mancos Shale beneath, and upper carbonaceous member of Wepo Formation, above.

Geolex — Lewis publications

Fossils identified in both formations listed.

Tertiary Period

Soils derived from weathered kimberlite contain abundant montmorillonite clay, often support more vigorous growth of grasses than do surrounding areas, and may show a marked absence of woody plants. Such areas likely had relatively slow changes in temperature and pressure that allowed larger crystal growth and greater penetration of the surrounding rocks by fluids.

Wyoming State Geological Survey

Journal of Paleontology, 50 2 : 354—355. McGraw-Hill encyclopedia of science and technology. This volcanism was gradually shut off in California as the movement of plate boundaries changed from one of to a sliding and transform motion see.
