Towards Sustainable Household Consumption? Trends and policies in OECD countries

Examples include energy efficiency, distributed energy resources and improving the flexibility of the power system. In circular value chains, waste is minimised and end-of-life products are recovered for reuse, remanufacture, and recycling.

Food supply success in pandemic belies wasteful farm policies

Catalysing the shift towards accessibility-based mobility systems 26.

Towards Sustainable Household Consumption? Trends and policies in OECD countries

The COVID-19 crisis has shone a spotlight on the resilience of global value chains, which have become increasing complex and globalised in recent decades. In many countries urban planning has led to sprawling cities, with structurally higher GHG emissions and air pollution than dense cities, for several reasons including increased reliance on private cars. Increased ecosystem pressures due to agriculture could also have implications for potential creation of new human diseases.

Towards Sustainable Household Consumption? Trends and Policies in OECD Countries

Refunds by law: In Australia, consumers have a legal right to obtain a refund from a business if the goods purchased are faulty, not fit for purpose or don't match the seller's description. Resilience to climate change is one specific aspect of improving the overall resilience of economies and societies.

Towards Sustainable Household Consumption? Trends and policies in OECD countries

International agreements already exist across many of these dimensions, such as the Paris Agreement on climate change, the Aichi Biodiversity Targets, and the Sendai Framework for disaster risk reduction.

Building back better: A sustainable, resilient recovery after COVID

Global interconnectedness has helped to create huge economic and social benefits for decades, albeit unequally, but also facilitated the rapid spread of the pandemic.
