**Western Kentucky Fluorspar District, Kentucky Geological Survey, University of Kentucky**

Unknown Fluorine Mary Belle No.

**Western Kentucky Fluorspar District, Kentucky Geological Survey, University of Kentucky**

It forms in oxidized zinc deposits. Hematite crystals have been observed lining the cavities of geodes from Estill County. The largest crystals in Kentucky are associated with veins in Boyle and Fayette Counties - they have been documented in excess of 200 pounds! Olivine alters readily to serpentine.

**Forgotten Passages: Fluorspar Mills in operation in the County in 1958**

Chert abounds in the upper St.

**12 Ghost Towns In Kentucky That Will Take You Back In Time**

Acid test: effervesces in nitric acid. Cleavage: perfect, but commonly massive.

**Illinois Fluorite**

These minerals are biogenic deposits. Apatite is common in various places in Kentucky.
