## Deconstructing *Mus musculus*: advances in understanding ancestry, structure, and variation in the genome of the laboratory mouse

It doesn't have redundancy, or fidelity, or any of the other descriptors we apply to information.

## Hampton L. Carson Papers :: American Philosophical Society

Until the availability of high-density arrays, the consensus was to declare a strain homozygous after 20 generations of inbreeding. Introgession The transmission of a novel allele into a population by hybridization followed by backcrossing to one of the parental populations. Monophyly When a taxon forms a single clade in a phylogeny, meaning that it contains all descendants of the most recent common ancestor of all members of the group. Mosaic genome A genome derived from multiple distinct ancestries. I admire him tremendously, even though we've been arguing back and forth for years now.

## Deconstructing *Mus musculus*: advances in understanding ancestry, structure, and variation in the genome of the laboratory mouse

If a researcher was directly involved in the production of a particular group of records, such as the subject of a student file or the writer of a grant proposal, then consult with the History of Science Curator for access to the file in question. The Dobzhanskys had one daughter, Sophie, who later married the American archaeologist and anthropologist. This is especially true for isolated and frequently unique ecosystems such as islands, and there are efforts to combat this problem.

## Theodosius Dobzhansky

After the award, Loftus gave a talk on the fallacies of memory, a talk I found quite impressive. They had a great-books approach.

## Theodosius Dobzhansky

The name of each taxon is followed by a list of example species and the total number of species in parentheses. Finally, the researchers were able to narrow in on a group of genes that may have undergone natural selection in the group, suggesting which adaptations were crucial for making a

well-functioning penguin. Also in 1937, he became a of the.
