## Rhum gas field

An associated risk here is that high-carbon-intensity developments may struggle to meet sanctioning requirements and late-life producing assets may face permanent shutdown earlier.

## Exploration drilling activity expected to recover in 2021, says Westwood Global

Low-emission design will become part and parcel of new field development plans. All three areas of expertise are used by scientists and engineers elsewhere, whether examining Antarctic samples, raising wrecks or studying the of the. In exploration wells, where flow rates are expected to be 10 tonnes of gas per day, testing is licensed by the Environment Agency to 30 days, extendable to 90 days.

## National Geological Repository

Gas production and export began on 20 December 2005. OGUK estimates about 8000 jobs have been lost so far this year in the basin, but a more thorough assessment is due to be carried out early in 2021.

## UK Continental Shelf Oil Well Records (Paperback, 28th phase): Great Britain: 9780114130442

Expenditure is therefore projected to be £19 billion by 2030, rising to £23 billion by 2040, for existing facilities. Ageing North Sea fields, already seen as a marginal bet from which the biggest oil companies have been retreating, look very vulnerable.

## Oil's not well: UK industry in crisis as pressures continue to mount

During this time, seven fatal helicopter accidents claimed the lives of 94 offshore workers and flight crew. The spill, estimated at 21,750 barrels approx 3,000 metric tons , was the country's second largest ever, according to Norway's oil safety authority.
