## Promoting patient uptake and adherence in cardiac rehabilitation

CR services are available in only 23% of the LMICs, where 80% of CVD deaths occur underlining the insufficient supply of CR in countries with the greatest cardiovascular burden. Nationally Non-Covered Indications All other indications are non-covered.

## Decision Memo for Cardiac Rehabilitation Programs (CAG)

The Centers for Medicare and Medicaid Services CMS determines: The evidence is adequate to conclude that cardiac rehabilitation is reasonable and necessary following acute myocardial infarction AMI , coronary artery bypass graft CABG , stable angina pectoris, heart valve repair or replacement, percutaneous transluminal coronary angioplasty PTCA or coronary stenting, and heart or heart lung transplant. Benefit Category For an item or service to be covered by the Medicare program, it must meet one of the statutorily defined benefit categories outlined in the Social Security Act. For older participants, qualitative analysis suggested that peer support or postdischarge visits may improve enrolment, and group sessions promoting self-regulation skills may increase completion.

## Promoting patient uptake and adherence in cardiac rehabilitation

Journal of the American College of Cardiology 2001;37 7 :1891-1900. CMS is removing NCD language regarding specific exit criteria from a cardiac rehabilitation program.

## Impact of Covid

Patients with cardiac disease resulting in slight limitation of physical activity. Physicians, in both high and middle-income settings, are demonstrated to play an important role in CR utilization.
