carbonaceous shales and thin, discontinuous laminated beds of very fine-grained sandstone, which contain numerous vertical to sub-vertical reed-mold plant structures.

Summary of Citation

The conspicuously burrowed character of nearly all of these limestones suggests periods of slower deposition that favored development of an extensive mobile infauna, producing numerous burrow structures.

Shorter contributions to paleontology and stratigraphy, 1993

Cretaceous is represented rather largely, but no definite examination has been made to show its extent, as it lies mostly beyond the settlements. The first of these reached very large size and commonly hosted clusters of *Pseudoperna bentonensis*.
